SPORT OPTICS & ACCESSORIES
PRODUCT CATALOG

BARSKA. Sport Optics Products As Diverse As The Customers Who Use Them.

30TH For decades, we've been a leading innovator in security solutions and optics technology. We've relentlessly pursued advancements in security systems, protecting what matters most. Our unwavering commitment to pushing the boundaries of optics has enabled us to capture the world in remarkable detail, enhancing everything from everyday moments to scientific discovery.

This focus on innovation isn't just about us - it's about empowering you. We strive to build trust and partnership with our customers, clients, collaborators, and employees. Your support is the driving force behind our success, and together we're excited to continue this journey. As we step into the future, we carry the lessons of the past and a vision for what lies ahead. With your continued support, we're confident the coming years will be filled with even greater innovation, breakthroughs, and shared successes. Thank you for being part of our story. Here's to transforming the way we see and secure the world!

Riflescopes and Shooting Accessories

Barska riflescopes cater to all shooting disciplines, offering exceptional value for every marksman. Whether you're a serious tactical shooter, a long-range competitor, a varmint hunter, a big game enthusiast, or a recreational target shooter, Barska has a riflescope designed to meet your needs and maximize your performance. Our commitment to quality design ensures you get the features you need at a price that won't break the bank.

Binoculars

Barska binoculars deliver exceptional value, quality, and cutting-edge technology, making them the perfect companion for any outdoor

enthusiast. Featuring two premium lines, the Level HD and Level ED, that guarantee stunning image sharpness and detail. These binoculars utilize top-of-the-line features like fully multi-coated lenses and, in the Level ED, Extra-Low Dispersion (ED) glass, for unparalleled clarity and precision. For those who prioritize vibrant colors, the Crush series offers bright, colorful optics that bring the world to life in rich detail. No matter your adventure, Barska has the perfect binocular. They come in a wide range of sizes, from compact and portable to powerful zoom options, ensuring you can find the ideal fit for your needs.

Spotting Scopes

Barska spotting scopes are the ideal companion for any outdoor enthusiast, astronomer, or even professional surveillance operations. A variety of models to suit your needs, from compact and portable for easy carrying to large and powerful for long-distance viewing. The Level ED spotting scope sets the standard for exceptional image quality. It utilizes extra-low dispersion (ED) glass and a triplet apochromatic lens to deliver stunning views with vivid colors, sharp contrast, and superior light transmission. For adventures on the go, the Naturescape™ series packs a powerful punch. These compact spotters boast high-quality, fully multi-coated optics and a wide zoom range, all housed in a sleek, portable body. No matter the weather conditions, the Level™ series has you covered. Its unique rubber armor safeguards the scope while providing a firm grip for comfortable use. With Barska spotting scopes, there's a perfect fit for every outdoor passion.

Loaded Gear™

Loaded Gear™ caters to today's active individuals with a comprehensive range of innovative products. Offering protective gear cases, backpacks, gun cases, tactical gear, and accessories – all designed to fit your active lifestyle. With a variety of colors to choose from,

you can find the perfect gear to match your style and needs.

Winbest®

Unearth hidden treasures with the user-friendly Winbest® metal detectors. Designed for ease of operation, most Winbest models get you started treasure hunting quickly and effortlessly. Whether you seek hidden coins, relics, or other valuables, Winbest detectors help you turn "trash from treasure" into a reality.

Microscopes

Unveiling a world unseen: Our digital microscopes seamlessly combine high-quality optics with advanced digital imaging. This innovative technology opens doors for exceptional educational experiences. Multiple viewers can now share the magnified wonders of a specimen simultaneously – either directly on the microscope's screen or projected onto a PC. These powerful tools even allow users to stream high-resolution images straight to smartphones or other mobile Wi-Fi devices, making exploration and discovery accessible from anywhere.

This catalog equips you with the knowledge you need to select the perfect Barska® riflescope, binocular, spotting scope, telescope, or accessory for your specific needs. But our commitment goes beyond the sale. Our dedicated technical and customer support ensures you have the resources to maximize your enjoyment of your Barska® product for years to come.

RIFLESCOPES

BARSKA® PRECISION SCOPES & ACCESSORIES

BARSKA Riflescopes

Unleash peak performance with Barska's versatile rifle scope lineup.

Level Up Accuracy

The Level HD series boasts illuminated red or green reticles that adjust quickly for color and brightness with a convenient rheostat, ensuring seamless adaptation to any lighting condition.

Master Compact Power

Ideal for flat-top AR rifles, the Contour series features external target turrets that lock securely to prevent accidental windage and elevation adjustments.

Long-Range Domination

The sniper scope series delivers high-resolution spotting for distant targets, with a built-in sunshade that minimizes glare for a clear view.

Complement both function and form. Barska's extensive selection caters to every shooter, from tactical enthusiasts to varmint hunters. Explore our FLX flashlights, GLX lasers, and other shooting accessories – all embodying Barska's dedication to quality design and exceptional value. Find your perfect fit with Barska.

RIFLESCOPE TERMINOLOGY

A riflescope is used to view distant targets and surrounding objects to make them appear closer, and also indicates a bullet's point of impact. A riflescope can provide safer and more accurate shooting.

MAGNIFICATION (POWER)

Magnification is the number of times the object being viewed is enlarged. Riflescopes are often identified by two numbers, for example: 6x42. The first number indicates the magnification or the power of the riflescope, expressed by the letter "x", for times. This means that the object being viewed appears to be 6 times closer than would be seen with the naked eye.

VARIABLE POWER/ZOOM

Zoom is the ability of the riflescope to change magnification continuously throughout its design range, providing a low power to high power range. For example, a 6-24x50mm riflescope has the ability to magnify an object from 6 to 24 times.

Low Power: Eg. 1.5-6x42, 2-7x32.

These riflescopes are ideal at close range and for shooting moving targets.

Medium Power: Eg. 3-9x50, 2.5-10x50.

These riflescopes are ideal for big-game hunting at medium range.

High Power: Eg. 6-24x50

These riflescopes are best for target shooting, small-game and varmint hunting.

OBJECTIVE LENS DIAMETER

The second number in the reference (Eg. 6x42) indicates the diameter of the objective lens or the front lens. The larger the objective lens, the better the light transmission, thus the brighter the image.

OPTICAL COATINGS

Various coating processes on the lenses and prisms will determine the brightness and the light gathering of a riflescope thus providing higher contrast and brighter images. The different types of coatings are:

Coated = A single layer on at least one lens surface.

Fully Coated = A single layer on all air-to-glass lens surfaces.

Multi-Coated = Multiple layers on at least one lens surface.

Fully Multi-Coated = Multiple layers on all air-to-glass surfaces.

FIELD OF VIEW (F.O.V)

The side-to-side linear measurement of the circular field seen through a riflescope. It is defined by the width in feet of the area visible at 100 yards, or in meters at 100m. The higher the magnification, the narrower the field of view.

RESOLUTION

The measurement of the riflescope's ability to distinguish fine detail and sharpness.

EXIT PUPIL

This refers to the size of the small disc of light that exits a riflescope. To determine the size, divide the objective lens diameter by the power. For example a 6x42 riflescope will have an exit pupil of 7mm. (42/6=7).

EYE RELIEF

This is the distance a scope can be held away from the human eye and can still observe the entire field of view. Long Eye Relief (LER) reduces eyestrain and provides an extra margin of comfort and safety.

TUBE DIAMETER

This refers to the diameter of the body of a riflescope; that portion between the belled ends.

WATERPROOF/FOGPROOF

Riflescopes can be O-ring sealed for waterproof protection, and fogproof which means that they are nitrogen-purged to prevent fogging inside the optical surfaces. These models are able to keep completely dry inside after immersion in water, thus suitable for a wide range of outdoor activities.

PARALLAX

A condition that exists when the image being viewed through a riflescope is not focused precisely on the reticle. Parallax can be detected by an out-of-focus image or moving image in relation to the reticle as you move your eye left to right, up and down while looking in the scope. Scopes with an adjustable objective or turret provides the advantage of parallax correction.

PRECISION ADJUSTMENTS

The windage and elevation adjustments affect accuracy and are used to zero-in on the scope. Windage is the horizontal (left-to-right) adjustment, usually the side turret of the scope. Elevation is the vertical (up-and-down) adjustment, usually the top turret of the scope. Adjustments are usually measured in click value. (1/4 MOA = 1/4" at 100 yards) for finer precision.

RETICLES

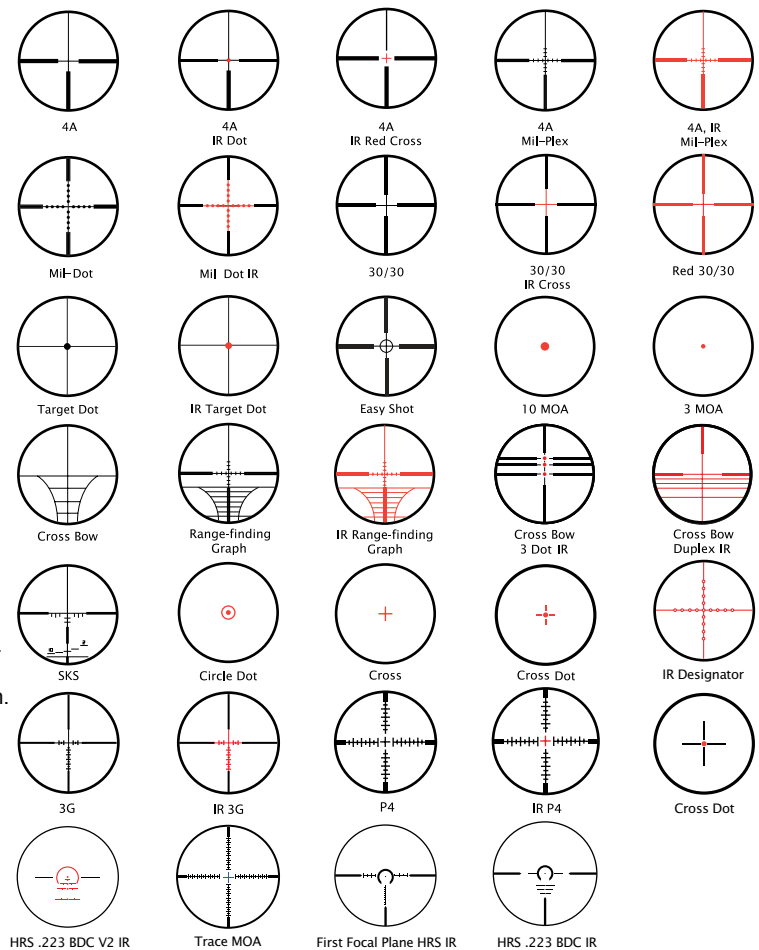

A reticle is the crosshair or pattern placed within the scope, creating a center point to facilitate aiming at a specific object. Certain reticles can also be used to measure distance.

RIFLESCOPE LIMITED LIFETIME WARRANTY

(Within USA and Canada only)

This warranty does not cover consumer-caused damages, abuse, normal wear-and-tear and unauthorized repairs or modifications.

For further detailed information, please refer to the warranty policy enclosed with products.

LEVEL™

Barska's Level Series of riflescopes elevate your shooting experience with next-level optical performance. Precision engineering ensures easy target acquisition with an illuminated MOA reticle offering a choice between red and green. A conveniently positioned side-mounted rheostat allows for quick adjustments to both reticle color and brightness, adapting perfectly to any lighting condition. External windage and elevation knobs provide precise control, with locking mechanisms to prevent unwanted adjustments. Capping it all off, Level scopes boast fully multi-coated optics for exceptional clarity in any environment.

4-16x50 IR
AC12784

“ACCU-LOCK”

BARSKA's Accu-Lock system utilizes a coil spring positioned within the scope to securely lock the inner tube. This coil positioning system allows the scope to stay locked dead-on to the target shot after shot.

Side Parallax Adjustments

Allows fine adjustment on parallax correction for specific ranges using the turret-mounted focus knob without taking your eyes off the target.

1.5-6x44 IR

LEVEL HD™

Level HD riflescopes are designed to give your rifle a significant accuracy boost. The robust monotube construction safeguards the internal optics from shocks, impacts, and recoil – whether you’re using an AR-15 platform for sport shooting or a large-caliber rifle for hunting. Argon gas purging prevents internal fogging in frigid temperatures, while the phase 3 hard anodizing ensures a scratch-resistant finish. The illuminated reticle offers a choice of red or green with adjustable brightness, allowing for precise aiming in any lighting condition. External windage and elevation knobs provide for fine adjustments and lock securely to prevent accidental movement. Finally, premium fully multi-coated optics deliver exceptional clarity across all environments.

Level HD Features

24mm objective lens | Waterproof and fogproof | Extra rigid shockproof construction | Premium fully multi-coated optics | Illuminated red and green reticle | Adjustable reticle brightness | 30mm tube construction | Lockable easy-grip external windage and elevation adjustments | 1/2 MOA click adjustments | Side adjustable parallax | Precise and easy-to-use for tactical environments | Fast focus eyepiece | Includes protective scope caps | Limited Lifetime Warranty

SWAT-AR

1-8x24 IR
AC13326

1-4x28 IR
AC11872

Designed specifically for tactical AR-platform rifles like the M4 and AR-15 carbine, Barska's SWAT-AR riflescopes boast a low mounting profile thanks to the included cantilever AR mount. This positions the scope ideally forward of the charging handle for easy manipulation. SWAT-AR scopes feature external windage and elevation turrets for precise adjustments, while the glass-etched reticle offers dual illumination in red and green. Red provides superior visibility in low-light situations, while green excels in daylight conditions.

SWAT-AR Features

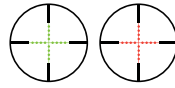

External windage and elevation | Red/green illuminated reticle | Adjustable rheostat | Fully multi-coated optics | CO2 dry nitrogen purged and o-ring sealed for waterproof/fogproof protection | Shockproof high impact rated design to withstand repeated abuse in rugged shooting conditions | Powered by one CR 2032 3V lithium battery (included) | Includes dual cantilever ring scope mount and protective scope caps

AR6 | Riflescope

Barska's AR6 riflescopes are designed for mid to large caliber rifles, catering to the demands of serious shooters. These scopes boast a 6x magnification zoom, offering a wider range of usable magnification intervals compared to traditional options. Built tough, the AR6 is waterproof, fogproof, and shockproof, ensuring reliable performance in any environment. Backed by our the Limited Lifetime Warranty.

Barska's 3rd generation SWAT series scopes deliver unbeatable value for tactical shooters with their outstanding performance, feature-rich design, and rugged construction. These scopes boast an illuminated, glass-etched Mil-Dot reticle with variable brightness to match any lighting condition. Acquiring your target and making precise adjustments is a breeze thanks to the fast-focus eyepiece, rapid zoom magnification ring, and external, easy-grip target-style turrets with lockable windage and elevation adjustments. For parallax correction at various distances, a conveniently located side parallax adjustment turret is included. Hair-splitting accuracy is achieved through impressive, fully multi-coated optics, making the SWAT ideal for varmint and long-range shooting. Built to endure extreme conditions, the SWAT performs flawlessly in both scorching and frigid temperatures. The package is completed with a set of 5/8" high see-through rings for mounting, a 5" sunshade to combat glare, and flip-up lens covers for protection. As with all Barska products, the SWAT series is backed by a Limited Lifetime Warranty.

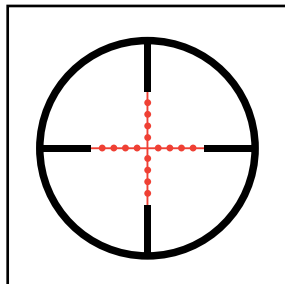

3rd Generation Lockable Windage and Elevation Adjustments

Lockable easy-grip target-style windage and elevation adjustments designed with audible, tactile "clicks" for precision.

Side Parallax Adjustments

Allows fine adjustment of parallax correction for specific ranges using the turret-mounted focus knob, without taking your eyes off the target.

Illuminated Glass-Etched Mil-Dot Reticle

The glass-etched mil-dot ensures accuracy and precision. Illuminated reticle with an adjustable rheostat of 11 settings for low light targeting.

Accessories Included

Includes set of 5/8" high see-through tactical rings, 5" sun shade to create custom length and to protect against glare and flip-up scope caps.

BENCHMARK

The Benchmark riflescope series prioritizes accuracy, durability, and exceptional optical quality for the discerning shooter. Its Mil-Dot reticle, positioned on the first focal plane, ensures consistent measurement regardless of magnification. This allows for precise mil-ranging, holdovers, or any other technique that relies on accurate reticle measurements at any zoom level. Built to withstand the elements, boasting waterproof, fogproof, and shockproof construction. Additionally, the fully multi-coated optics deliver crisp, distortion-free views. To ensure peace of mind, Barska backs the Benchmark series with a Limited Lifetime Warranty.

Benchmark Features

Mil-dot reticle / First focal plane | Accu lock | Side focus adjustable objective | Fully multi-coated optics | 1/8 MOA | Parallax-free @ 50 yd. | 30mm tube diameter | Includes 3" shade to create custom length and to protect against glare | Limited Lifetime Warranty

Sniper scopes excel at pinpointing faraway targets with exceptional clarity, making them crucial for situations where precision is paramount. These scopes feature windage and elevation adjustments via external turrets with target-style dials. Once you've fine-tuned the scope for your specific shooting distance, you can reset the zero on the turret dials using a small screw. The multi-coated lenses provide impeccable clarity for viewing and aiming at distant objects, whether stationary or moving. They also offer protection from the sun's UV rays and improve light transmission. Sniper scopes find application in hunting, particularly varmint hunting, where engaging targets at significant distances is necessary to ensure the safety of the hunter. In all these scenarios, these scopes have a proven track record of accuracy and durability, even in the most challenging environments.

Sniper Features

Waterproof and fogproof | Extra rigid shockproof construction | Multi-Coated optics | Illuminated red and green mil-dot reticles | 30mm or 1" tube construction | Easy-grip target-style windage and elevation adjustments | 1/8 or 1/4 MOA click adjustments | Side adjustable parallax (select models) | Precise and easy-to-use for tactical environments | Fast focus eyepiece | Includes protective scope caps and set of rings | Limited Lifetime Warranty

Snipers Edge

The built-in sniper edged sun-shade is set back in the housing to allow the sun shade to cast a shadow and reduce glare for use in bright sun.

Side Parallax Adjustments

Select models feature a side focus which allows fine adjustment on parallax correction for specific ranges using the turret-mounted focus knob without taking your eyes off the target.

Dual Color Mil-Dot Reticle

Depending on the lighting conditions the mil-dot reticle can be switched on from red to green and back to black. Green is ideal in the day time or red for low light situations.

Barska Tactical series of scopes are built to deliver maximum control and accuracy, even in extreme shooting conditions. Select models boast features like side parallax adjustment for precise focusing at any distance, and a first focal plane Mil-Dot reticle that allows for range estimation at all magnification settings. These tactical scopes also come equipped with Barska's Accu-Lock system, which utilizes a strategically placed coil spring to securely lock the inner tube in place. This innovative system ensures your scope stays dead-on target, shot after shot. Rugged, waterproof construction keeps you confident in any environment, making Barska Tactical scopes the ideal choice for serious shooters.

Tactical Features

Long range / tactical scope | Accu-Lock technology | Side adjustable parallax setting | Strong high grade alloy construction monotube | Illuminated mil-dot glass etched reticle | First focal plane reticle to estimate range at any magnification | Waterproof and fogproof | Extra-rigid shockproof construction | Fast focus eyepiece | Windage and elevation adjustments | Fully multi-coated optics | Includes pair of rings and scope caps | Limited Lifetime Warranty

First Focal Plane Mil-Dot Reticles

Allows you to estimate range at all different magnification settings. With the reticle at first focal plane, the reticle expands as the magnification increases. This creates dead-on precision and accuracy.

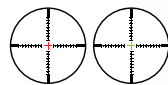

Side Parallax Adjustments

Allows fine adjustment on parallax correction for specific ranges using the turret-mounted focus knob without taking your eyes off the target.

“ACCU-LOCK”

BARSKA's Accu-Lock system utilizes a coil spring positioned within the scope to securely lock the inner tube. This coil positioning system allows the scope to stay locked dead-on to the target shot after shot.

POINT BLACK

Built for the .223 bullet, the Barska Point Black series delivers optimal performance with a multi-grain Bullet Drop Compensation (BDC) chart for 50, 55, and 62 grain bullets. These versatile riflescopes seamlessly compliments various firearms chambered in .223, including varmint, bolt-action, semi-automatic rifles, AR-15/M-16s, Mini-14s, and ranch rifles. Packed with features, the Point Black series boasts fully multi-coated optics for a clear view, high-impact shockproof construction for durability, and convenient side parallax adjustment. The variable low-to-high power zoom magnification offers flexibility for different shooting scenarios, while the precise 3G reticle aids in accurate targeting.

The 1-inch main tube is built to withstand tough conditions, featuring a shockproof design and O-ring seals for complete water and fogproofing. All Point Black scopes come with lens covers, flip-up caps, and Barska's Limited Lifetime Warranty for lasting peace of mind.

Point Black Features

.223 Multi-grain B.D.C elevation adjustment | Accu-lock technology | Side adjustable parallax setting | Strong 1" monotube construction | Green, red and blue illuminated 3G Glass Etched Reticle (select models) | Waterproof and fogproof | High impact rated shockproof construction | Fast focus eyepiece | Easy grip target-style windage and elevation adjustments | Fully multi-coated optics | Flip-up scope caps included | Limited Lifetime Warranty

.223 Multi-Grain B.D.C Elevation

Multi-grain bullet drop compensation chart features three common medium to heavy weight .223 bullet grains: 50 grain, 55 grain and 62 grain.

3G Glass Etched Reticle

Three of the five models feature a center lit green, red and blue 3G illuminated glass etched reticle for low light targeting.

Side Parallax Adjustments

Allows fine adjustment of parallax correction for specific ranges using the turret-mounted focus knob, without taking your eyes off the target.

Huntmaster PRO

The Huntmaster Pro lives up to its name, offering one of the most advanced and feature-rich riflescope experiences. A center-lit, illuminated 30/30 reticle with 11 brightness settings provides exceptional visibility in low-light conditions. The convenient, rear-mounted rheostat with click stops allows for easy and precise adjustments. Focusing is a breeze with the fast focus eyepiece, and smooth zoom adjustments ensure effortless magnification changes. Parallax-free at 100 yards, these scopes eliminate aiming errors due to focal plane misalignment. Large objective lenses maximize light gathering, while multi-coated optics deliver a crisp, clear view even in challenging weather. The rugged 1-inch monotube construction is built to withstand heavy recoil and the demands of high-power shooting. For added convenience, lens covers are included, and Barska's Limited Lifetime Warranty provides peace of mind.

Huntmaster Pro Features

Waterproof, fogproof and shockproof | Large objective lens for increased light transmission | Multi-Coated optics | Sleek, sturdy construction | Parallax-free at 100 yards | Fast focus eyepiece | For low-light and dark backgrounds hunting conditions | Illuminated center-lit reticles | Scope caps included | Limited Lifetime Warranty

EURO-30 PRO

The Euro-30 Pro series scopes combine European design with world-class engineering to create the perfect choice for big game hunting, whether you're on a local adventure or an international expedition. These versatile scopes come in three models, all featuring an illuminated European 4A IR reticle with 11 brightness adjustments for fine-tuning in various lighting conditions. The durable 30mm tube construction can handle heavy recoil, while the large objective lenses and fully coated optics deliver bright, clear images even in low light. Additionally, the Euro-30 Pro series is built to withstand the elements, being waterproof, fogproof, and shockproof. For convenient mounting, each scope includes a set of 5/8" high see-through rings and lens covers.

The Varmint rifle scope series is one of our most versatile and is available in a wide selection of sizes and reticles for many types of shooting including varmint hunting, target shooting, long range, and precision shooting. Select Varmint scopes feature an Adjustable Objective (AO) for long-range targeting. Turn the objective lens to focus on distant targets. The Varmint's large objective lens size coupled with multi-coated optics increases light transmission and provides superior clarity. In addition, Varmints are available with a variety of reticle types including 30/30, Mil-Dot, Target and Rangefinder. Waterproof, shockproof and fogproof, Barska's Varmint Series is like having many scopes in one. Backed by Barska's Limited Lifetime Warranty.

Varmint Features

Waterproof, fogproof and shockproof | Fully multi-coated and multi-optics for clear images | 1" tube construction | Adjustable objective lens to adjust for parallax (select models) | 1/8 and 1/4 MOA fingertip adjustments (select models) | Large objective lens for increased light transmission | Quick access magnification zoom ring | Designed for long-range and shooting | Scope caps Included | Limited Lifetime Warranty

CONTOUR

Performance that doesn't stop short. Barska's Contour series meets the hunter's demands by combining performance and innovation in a compact riflescope without sacrificing ruggedness, dependability, and craftsmanship. Contour scopes offer low magnification combined with long eye relief, making them ideal for close range action. Contour scopes are engineered with extra rigid shockproof construction to handle the demands of pistols, shotguns, and other types of high recoil firearms. This series is a clear winner for various types of shooters and hunters in the field.

A variety of compact scopes and reticles for various types of shooting. Ideal for crossbows, pistols, shotguns and more. Extremely long eye relief. (select models)

AIR GUN | Air Riflescope Series

The Air Gun series is designed to withstand the extraordinary punishing recoil energy generated by air guns. Barska's Air Gun series features multi-range parallax setting adjustments and a Mil-Dot reticle. Fully optics and an adjustable objective allows these scopes to deliver the accuracy and precision you need shot after shot. Waterproof, fogproof and shockproof, the Air Gun scopes are ideal for competition and recreational shooting.

Air Gun Features

Waterproof, fogproof and shockproof | Fully coated optics | 1" tube construction | Adjustable objective lens to adjust for parallax | 1/4 MOA fingertip adjustments | Designed to withstand the punishing recoil energy of air guns | Mil-Dot reticle | Scope caps included | Limited Lifetime Warranty

1x35 IR AR-X
AC12176

This tactical sight is a versatile optic designed for precision shooting. Its 35mm objective lens offers excellent clarity and a wide field of view, while the illuminated reticle provides multiple patterns and adjustable brightness in both red and green for optimal visibility in various lighting conditions. With its rugged construction, adjustable brightness, and easy-to-mount Picatinny rail attachment, this sight is ideal for tactical applications and demanding shooting scenarios.

Features 4 different illuminated green and red reticle patterns, 5 levels of brightness, windage and elevation adjustments. The body features a built-in sniper edged sun-shade and a standard picatinny rail mount. Includes battery and flip-up scope caps.

1x20 HQ Red Dot
AC13158

Experience precision with 1x magnification and a 20mm objective lens in our cutting-edge optic. The illuminated red dot reticle provides quick target acquisition. Enjoy adjustable reticle brightness through user-friendly push buttons. Take advantage of the auto-adjust mode, which fine-tunes the dot brightness based on surrounding lighting conditions. The external windage/elevation turrets empower easy adjustments, while the quick-release mount ensures consistent zero setting. With 1 MOA click adjustments, our optic offers remarkable accuracy. Compact at 2.95 inches in length and weighing 7 oz, it's designed for optimal performance.

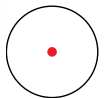

Compact in size | Push button illuminated red dot reticle | Adjustable sensed brightness setting | Windage and elevation adjustments | Standard weaver style rail mount | Includes batteries and scope caps

1x30 HQ Red Dot
AC13160

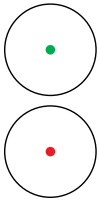

Enhance your shooting accuracy with our high-performance optic featuring 1x magnification and a 30mm objective lens. The illuminated red dot reticle, complete with adjustable brightness settings using push buttons, ensures precise targeting in various lighting conditions. Experience seamless transitions with the auto-adjust mode, optimizing dot brightness based on the environment. Benefit from external windage and elevation turrets, allowing personalized adjustments, while the quick-release mount guarantees maintained zero setting. Enjoy the convenience of 1 MOA click adjustments, and all this in a compact 4.13-inch length, with a lightweight design at just 10.8 oz.

RedDot

Ultra-fast target acquisition, pinpoint accuracy, and a wide field of view make the red dot series ideal for handguns, rimfire rifles, pistols, and crossbows. Each Red Dot has a finger adjustable rheostat for variable reticle brightness control, anti-reflective coating, and integrated mount for optimum performance. Selected models feature a state-of-the-art dual-color green & red dot reticle for all-day shooting versatility. All red dots feature wide field of view, unlimited eye relief, and multi-coated optics.

210 LUM, LED FLX Flashlight
BA11497

- 210 lumens
- Compact and portable
- Water-resistant design for durability
- Textured body for a secure hold
- Beveled edge for added protection
- High-efficiency LED for long-lasting light
- Multiple lighting modes: three brightness levels, SOS, or strobe
- Up to 2.2 hours on 2x CR123A batteries (not included)
- Includes a momentary on/off long cable switch, 1" Weaver style mounting ring, and a wrist strap

25 LUM, LED Headlamp Flashlight
BA11579

- 25-lumen LED headlamp for bright light
- Hands-free convenience
- Ideal for outdoor activities like hiking and hunting
- Water-resistant and shockproof for reliability
- Comfortable head strap with a tilting hinge for precise beam direction
- High-efficiency LED for long-lasting light
- Up to 40 hours of runtime for extended use

GLX ^{3rd GEN} GREEN LASER RIFLE SIGHT

GLX Green Tactical Laser Sight
AU11404

Barska's GLX third generation tactical laser sight features external riflescope style windage and elevation (W/E) adjustments for quick, high precision targeting. The tactical design integrates a tactical edged bezel into the strong T6 aluminum body for added protection. The diamond cut exterior grip improves the mounting capability of the picatinny 1" mounting ring included with the laser sight.

Features

Working temperature between 59°-95°F | External riflescope style windage and elevation adjustments | Tactical edged bezel | Diamond cut exterior grip | 1" inch main tube

Includes

1" picatinny rail ring with removable cross-bar | Continuous push button on/off cap | Momentary on/off long cable switch | 1 CR-123A lithium battery

Item #	Description	Mount	Output Power	Wavelength	Max Reach Capacity	Adjustment Type	Battery Type	# Battery Included

GREEN LASER 200 LUMEN FLASHLIGHT

AU12716

Barska's green laser flashlight combo packs a powerful punch in a compact design. This versatile unit integrates a bright 200-lumen LED flashlight with a high-powered 5mW green laser sight. Switch between using just the flashlight, just the laser, or both for ultimate control in any situation. The green laser even features windage and elevation adjustments for precise targeting, making it ideal for low-light aiming.

Mount, easily attaches/detaches from standard size handgun/rifle/pistol with weaver style/picatinny rails | Three different target acquisition methods: flashlight, laser, and flashlight and laser together | Working temperature between 59°-95°F | Includes two CR123A batteries and momentary on/off long cable switch

RED LASER 200 LUMEN FLASHLIGHT

AU12714

Combining illumination and precision aiming, the Barska 5mW red laser flashlight combo offers the best of both worlds in a compact design. This unit integrates a powerful 200-lumen flashlight with a high-performance 5mW red laser sight. The built-in weaver style/picatinny mount ensures easy attachment to your firearm, making it a versatile choice for tactical applications.

Mount, easily attaches / detaches from standard size handgun/ rifle/pistol with weaver style/picatinny rails | Three different target acquisition methods: flashlight, laser, and flashlight and laser together | Working temperature between 14°F - 104°F | Includes two CR123A batteries and momentary on/off long cable switch

NEW

NVD-35 Night Vision Sight Adapter
BQ14028

NVD-35

Night Vision

Engineered with cutting-edge technology, this innovative device amplifies your existing day scope, delivering unparalleled low-light performance. Experience crisp, clear images in even the most challenging conditions, thanks to its advanced imaging sensor and high-resolution display. Whether you're tracking wildlife, patrolling security perimeters, or conducting covert operations, our Night Vision Sight Adapter is the essential tool for maintaining situational awareness and achieving your objectives in darkness.

Reticle Settings

Features

- 2x magnification
- Records images and video
- Large menu buttons
- Day or night viewing
- Internal screen
- 3 reticle options
- Water resistant
- Requires a minimum clearance of 1 3/16" to properly fit scopes
- Easily transfer files to a computer

Specifications

Item	BQ14028
Objective Lens	16mm

SHOOTING ACCESSORIES

Our lineup of shooting accessories includes a wide selection of shooting and precision aid accessories including a 15 piece boresighter kit, mounts, bipods, and a variety of parts and tools that are just as reliable as the Barska products they're intended to pair.

BORESIGHTER KIT

Barska's 15 Piece Boresighter Kit will ensure that your rifle is accurately zeroed when you're testing out a new rifle and scope combination. This Boresighter fits snugly in the rifle barrel to eliminate any "play" that can result in an inaccurate boresighting adjustment and poor shooting accuracy.

Caliber

Caliber (Cal.) is a system of measurement for the internal bore diameter of a rifled-barreled firearm (rifle or pistol) based on the decimal part of an inch (.22 Cal) or in millimeters (9mm). American caliber designations refer to the distance from land to land, not groove to groove.

UNIVERSAL PARTS & TOOLS

Our selection of high quality tactical parts and tools includes some of the most popular and essential types at extremely affordable prices. These products are made of high-strength carbon steel and are designed for years of use.

RINGS

Barska scope rings are precision engineered and manufactured using T6 Aluminum and Aluminum alloy for durability and weight savings. Selecting rings with the correct height to use with your scope depends on several factors including barrel taper, action length, ring position on the scope and the outside objective diameter of the scope. To help you determine which BARSKA ring model to select, refer to the chart in this section.

H-Height

Describes how high the rings lift the riflescope off the rifle body.

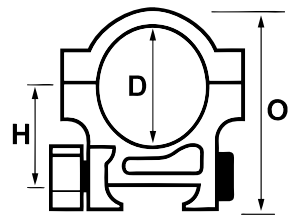

Height	Inches
Low	0.7" - 0.9"
Medium	0.9" - 1.2"
High	1.2" - 1.4"
Extra High	1.4" and above

D-Diameter

Refers to the inner diameter of the ring.

O-Overall

The height of the entire ring, from top to bottom.

MOUNTS

Barska bases are designed to provide you with solid performance in the field. T6 Aluminum construction results in durability and lighter weight while the rugged cross slot bolts secure the bracket to provide extreme rigidity. These bases permit the mounting of a variety of firearms.

Types Of Mounts

Picatinny

A term for a mounting rail system where grooves are .206" wide and have a consistent center-to-center width of .394".

Weaver Style

A term for a mounting rail system where grooves are .180" wide and most have a consistent center-to-center width of .180. Most Weaver-style accessories will fit the Picatinny system however Picatinny accessories will not fit the Weaver-style system.

Dovetail

Airgun dovetail is a parallel set of grooves running along the top of a receiver to which bases may be clamped. The width of the airgun dovetail is 11mm, but can range from 9.5mm to 14.mm.

BIPODS

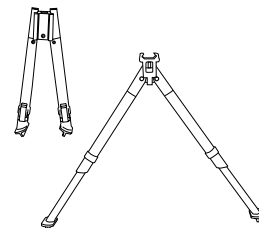

To make consistently accurate shots, last-second adjustments to the rifle's position, along with a stable rest, are often essential. With this in mind, we created our newest line of bipod models with features that allow you to easily set up and make these necessary adjustments. These bipods fit AR-15 and SKS rifles and also include a universal model that will fit an almost unlimited choice of rifle types.

Minimum Height

Refers to the length of the legs when they are its shortest.

Maximum Height

Refers to the length of legs when fully extended.

WARRANTY

Shooting accessories come with a 60-Day or 1-Year Limited Warranty USA and Canada Only, This warranty does not cover consumer caused damages, abuse, normal wear-and-tear, unauthorized repairs or modifications. For more information, please refer to warranty policy enclosed with products.

1-Year Warranty	
Bipods	Boresighter Kit
Cleaning Kits	Mounting Rings
Riflescope Mounts	AR Quad Rails
60-Day Limited Warranty	
Parts & Tools	

FLASHLIGHTS

Flashlights help to maintain a clear view in the dark or low light situations. Flashlights are available in a wide variety of sizes, powers and features depending on usage and intended purpose.

Lumen

The total amount of illumination a flashlight gives off is measured in lumens. A lumen is the amount of light emitted by one birthday candle located one foot away from the viewer.

Flashlight Warranty

Flashlights come with a 1-Year Limited Warranty USA and Canada only. This warranty does not cover consumer caused damages, abuse, normal wear-and-tear, unauthorized repairs or modifications. For more information, please refer to warranty policy enclosed with products.

LASERS

Laser sights are one of the most accurate tools for pinpointing a target. The laser will project a small illuminated dot that will represent the anticipated point of impact. This ensures accuracy when it has been mounted and then calibrated to the weapon through target practice prior to use in a real situation.

Green Vs. Red

Green is closer to the center of the visible spectrum, at 532 nanometers, so it's easier for our eyes to perceive the color vs. a red laser at 635 nanometers. A green laser can appear as much as 50 times brighter than the red equivalent. 532nm is the ideal wavelength to maximize visibility during day or night, which makes green lasers much more visible than red lasers.

Windage and Elevation

The windage and elevation adjustments affect accuracy and are used adjust the beam of the laser. Windage is the horizontal (left-to-right) adjustment. Elevation is the vertical (up-and-down) adjustment.

Laser Warranty

Lasers come with a 1-Year Limited Warranty USA and Canada only. This warranty does not cover consumer caused damages, abuse, normal wear-and-tear, unauthorized repairs or modifications. For more information, please refer to warranty policy enclosed with products.

Tactical Vertical Handle Grip

AW11173

- Have greater stability and control for easier aiming, especially during rapid fire
- Includes mounting rail and allen wrench
- Fits weaver style picatinny forend rails

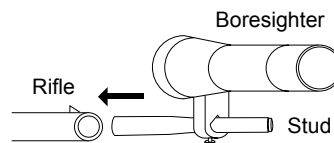

Item#	Description	Length (in)	Width (in)	Material	Color/Finish
AW11173	Tactical Vertical Handle Grip	4.56"	1.87"	High Impact Polymeric Vertical Forend Grip/Steel Shaft	Black/Matte

15 Piece Iron Boresighter Kit

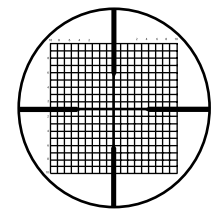

AW11076

This Boresighter Kit will ensure that your rifle is accurately zeroed when you're testing out a new rifle and scope combination. This system uses a 15 piece arbor set that ranges from .177 to .50 caliber and ensures precise bullet placement from the get-go. This boresighter fits snugly in the rifle barrel to eliminate any "play" that can result in an inaccurate boresighting adjustment and poor shooting accuracy. To use the boresighter reticle, adjust windage and elevation turrets until the cross hairs line up with the center of the boresighter's grid. Includes hard carrying case.

How a Boresighter Works

Insert stud into boresighter and insert other end into barrel. Align internal grid. Scope is now pre-zeroed.

Boresighter's Reticle

1-Year Limited Warranty

Bipods

Our premium bipods, crafted from high-strength, lightweight aluminum, provide an unshakeable platform for pinpoint accuracy. Whether navigating uneven terrain or engaging long-range targets, these adjustable bipods ensure stability without sacrificing mobility. Our design allows for adjustments, letting you adapt to any situation with ease. Deploy and retract your bipods in seconds, focusing on the shot, not the setup. When not in use, the legs fold compactly for discreet transport and storage. Available in various configurations to match your rifle and shooting style. Find your perfect bipod and elevate your shooting experience.

35mm Dual Cantilever Mount
AW12742

This robust, one-piece scope mount is designed to accommodate a wide range of 35mm diameter optical accessories. Featuring a cantilever design, it provides ample space for additional mounting options. Twelve heavy-duty screws securely lock your scope in place, ensuring zero retention.

Pair of Cantilever Mount with Integrated 30mm Ring, Picatinny Rail Top and 1" Inserts
AW11768

This versatile scope mount is designed to enhance your flat-top AR platform. It features an integrated 30mm ring and a detachable 1" insert for compatibility with various optics. The forward offset design provides ample clearance for longer riflescopes, while the included Picatinny rail top allows for mounting additional accessories. Six heavy-duty screws secure the optic, and a large thumb lock screw firmly attaches the mount to your firearm.

Pair of Cantilever Mount with Integrated 30mm Ring and 1" Insert
AW11677

These forward offset mounting rings offer extended space for a wide variety of 30mm or 1" optical accessories. This extra clearance allows for optimal scope placement and improved eye relief. Constructed with durability in mind, the rings feature six heavy-duty screws to securely hold your optic and a large thumb lock screw for a firm attachment to your firearm.

Mounts have a 1-Year Limited Warranty.

Built for peak performance, Barska bases deliver rock-solid stability in any environment. Constructed from lightweight yet durable T6 aluminum, these bases offer a perfect balance of weight and strength. Rugged cross-slot bolts ensure a secure connection with your firearm, providing exceptional rigidity for optimal accuracy. Select models even feature integrated rails for mounting additional accessories like riflescopes, lasers, and flashlights, expanding your customization options. Barska bases offer broad compatibility, allowing them to be used with a wide range of firearms.

3x30 Magnifier
AW11622

5x30 Magnifier
AW11654

Works in combination with red dot or electro sight to magnify image, resulting in increased accuracy. Can also be used as a hand held magnifier. Waterproof, fogproof and shockproof. Fully coated optics and includes picatinny/weaver style mounting ring.

Picatinny Dual Offset Rail
AW11724

Allows you to mount optic accessory on either side of this offset rail.

AR Flat Top Extended Riser Mount
AW11748

This mount raises mounting platform to .94" adding height to attach a scope or optic accessory.

Flip Up Front Sight
AW11882

Quick detachable front sight with adjustable square post. Precise elevation adjustments. Flip-up posi-lock design to guarantee zero.

Set of Weaver Style to Dovetail Rails, Short
AW11764

Converts weaver style/picatinny to a dovetail rail.

Mounts have a 1-Year Limited Warranty.

LOADED GEAR

www.LOADEGEAR.com

Loaded Gear™

Loaded Gear™ is your one-stop shop for premium gear designed for the active lifestyle. Our AX series hard cases, available in both aluminum-frame and edge-to-edge protection styles, come in a variety of sizes to perfectly suit your needs. Need professional-grade protection? The HD series features crushproof construction, customizable foam for a perfect fit, and multiple layers of padding

for ultimate security during transport. For those seeking mobility, the RX series offers heavily padded soft cases with additional pockets for easy organization on the go. We also provide a diverse selection of tactical vests, equipment, and backpacks, with many options available in a variety of colors to match your style. Elevate your adventures with Loaded Gear™.

Firearm not included

Loaded Gear™ Hard Case Terminology

Before choosing a Loaded Gear™ hard case, understanding the common features and specifications is crucial. This guide explains some of the most frequently encountered terms, helping you decipher the functionalities and specifications of each Loaded Gear™ tough case. For more in-depth technical details, each Loaded Gear™ hard storage utility case includes a dedicated features and specifications chart.

CASE MATERIAL

Hard cases are made from a polypropylene material resulting in a lightweight and durable case.

WATERTIGHT & AIRTIGHT PROTECTION

An o-ring is installed in all hard cases and is located in the groove of the lid of the case. As the lid and body of the tough case are locked together, the O-ring becomes compressed between these two hard surfaces creating a seal resulting in a watertight and airtight seal.

REINFORCED BODY

Exterior edge-to-edge ribbing and reinforced corners distribute weight placed on the utility case that provides crush proof strength for securely storing your valuables and equipment.

PRESSURE RELIEF PURGE VALVE

The airtight feature of the hard cases makes the case difficult to open without first relieving the interior pressure or vacuum that is caused when encountering changes in atmospheric pressure. The purge valve allows air into the hard case making it easier to open the hard case when experiencing changes in altitude and or temperature. The purge valve is located near the handle of the dry case and turning the valve relieves the internal pressure in the hard case.

TEMPERATURE TOLERANCE

Utility cases can withstand freezing arctic cold and searing desert heat, between -10°F to 210°F.

LOCKS & LATCHES

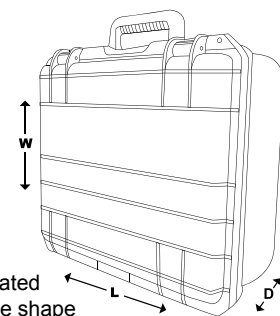

Most hard cases feature two built-in padlock mounting holes so you can safely lock valuables in the hard case. Accepts most standard padlocks and features strong heavy duty latches that keep the case closed.

OUTER DIMENSIONS

Length - Describes length of the case

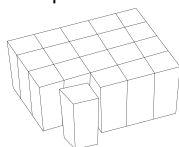

Width - Describes the width of the case

Depth - Describes the depth of the case

PRE-PERFORATED CUBED FOAM

Included with the hard cases are pre-perforated cubed foam that allows you to customize the shape of the foam.

How To Use the Cubed Foam

Consistently Shaped Item ex: laptop

1. Lay the item on top of the cubed sheet and trace the shape of the form that it occupies either with a felt tip marker or a piece of chalk. Remember to leave room for accessories that will also be stored within the case.

2. Carefully remove the pieces of foam that the shape occupies. Save these pieces just in case you ever need to modify the shape of the foam by gluing the pieces again. For a more custom fit, use scissors to cut the foam pieces.

Inconsistently Shaped Item ex: SLR camera

1. Use one sheet as the bottom shape that the object occupies and the other sheet as the top shape that the object occupies. You may need to modify each pre-perforated cubed foam sheet.

2. Follow steps one and two of Consistently Shaped item.

Notes on Placement :

The heavier or more sensitive the object is, the more foam you will want surrounding it for protection.

If possible, place larger and heavier objects towards the hinges and smaller lightweight objects closer to the latches. Try to distribute the weight of the objects evenly to avoid making the case heavier at one end than the other. Try different configurations for best fit and protection.

LOADED GEAR™ HARD CASE WARRANTY

Backed by a 1-Year limited warranty. The Loaded Gear™ Hard cases' warranty does not include damage caused by excessive abuse, improper handling, installation, maintenance, unauthorized repairs or modifications, and tampering in anyway. For more information, refer to enclosed warranty with products.

ABOUT LOADED GEAR™

Loaded Gear™ is a brand of innovative active products. At Loaded Gear™, our passion for innovation is our leading force in developing professional grade products and share them with today's active culture. Our product designs are powered by our industry expert's wealth of knowledge to bring concepts from design to market. To develop the best, we collaborate with professional equipment experts in the clothing, sporting goods, photography and consumer electronics industry.

Loaded Gear™ designs go through extensive real life application testing. Avid outdoor enthusiasts make up our quality inspection engineer team. Loaded Gear™ produces professional gear with designs driven by technology and utility and not by a market price point. Find professional Loaded Gear™ products at expert gear outfitters and major retail sporting good stores worldwide. We have the first-hand knowledge of how critical the quality of professional gear can be, that's why we stand behind our product with the Loaded Gear™ warranty and expert customer service. HARD CASES

The Loaded Gear HD series is a line of watertight hard cases designed to protect your fragile and valuable items. These compact cases are built tough with a reinforced design that can withstand shock and moisture damage. They feature an o-ring lining that creates a watertight seal when closed with the two exterior latches. For professional equipment transport, the Loaded Gear HD series includes an external purge valve to equalize atmospheric pressure. The cases also feature an edge-to-edge crushproof design to protect your belongings in even the harshest conditions. Inside, the cases come with two layers of customizable pre-perforated cubed foam and two layers of egg crate foam padding to keep your valuables secure during transport.

- Edge-to-edge crushproof case design
- Watertight protective case seal
- Pressure equalization case valve
- Pre-perforated cubed foam
- Egg crate foam padding

BARSKA® BINOCULARS

Barska Binoculars

Unleash the world in high definition with Barska binoculars. Our Level HD and Level ED series boast stunning clarity, thanks to waterproof and fogproof construction. For demanding conditions, the rugged Battalion series delivers tactical excellence. Prefer long-distance views? The Gladiator series offers high-powered zoom for exploring land or sky. No matter your pursuit, Barska binoculars come in a range of sizes – from compact to powerful – all built with our commitment to value, quality, and innovation. Elevate your next adventure, from sporting events to nature walks, with Barska's exceptional optics.

BINOCULAR TERMINOLOGY

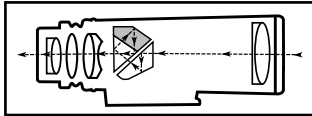

Binoculars are available in a wide variety of sizes, powers and features for different usage and purposes. A binocular consists of two optical systems that are connected by a hinge sharing a common focus system. By using a binocular, an image can be projected simultaneously for both eyes providing a realistic perception of depth.

PRISM SYSTEM/TYPE

The prism system of a binocular reduces the size of a long optical path and correct an inverted image. There are three most common types of prism construction.

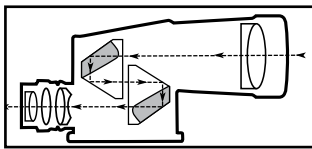

Roof Prism System

The prisms overlap and are aligned in a straight line with the lenses allowing to have a slim construction.

Porro Prism System

The objective is offset from the eyepiece offering greater depth perception and a wider field of view.

Reverse Porro System

The objectives are offset from the eyepiece in a horizontal way reducing the total size of the construction by about 30% compared to the traditional porro prism system.

PRISM GLASS

The common standards of optical prisms are barium-crown (BAK-4) glass or borosilicate (BK-7) glass. The BAK-4 is a higher quality glass that reduces light scattering, resulting in sharper and brighter images.

MAGNIFICATION (POWER)

Magnification is the number of times the object being viewed is enlarged. Binoculars are often identified by two numbers, Eg 10x50. The first number indicates the magnification or the power of the binocular, expressed by the letter "x", for times. This means that the object being viewed appears to be 10 times closer than would be seen with the naked eye.

OBJECTIVE LENS DIAMETER

The second number in the reference (eg 10x50) indicates the diameter of the objective lens or the front lens. The larger the objective lens, the better the light transmission, thus the brighter the image.

BINOCULAR FEATURES

Wide Angle

Binoculars with a wider field of view. This wide-angle feature is better for capturing action or fast sports.

Zoom

Zoom binoculars have variable powers of magnification allowing you to view closer in the distance without changing binoculars.

WATERPROOF/FOGPROOF

Waterproof binoculars are O-ring sealed for waterproof protection to keep dry inside after immersion in water. Some binoculars are also fogproof which means that they are nitrogen-purged to prevent anti-fogging inside the optical surfaces.

OPTICAL COATINGS

Various coating processes on the lenses and prisms will determine the brightness and the light gathering of a binocular, providing higher contrast and brighter images. The different types of coating are:

Coated – A single layer on at least one lens surface

Fully Coated – A single layer on all air-to-glass lens surfaces

Multi-Coated – Multiple layers on at least one lens surface

Fully Multi-Coated – Multiple layers on all air-to-glass surfaces

FIELD OF VIEW (F.O.V)

This is the side-to-side linear measurement of the of the circular field seen through a binocular. It is defined by the width in feet of the area visible at 1000 yards, or in meters at 1000m. The higher the magnification, the narrower the field of view.

CLOSE FOCUS DISTANCE

The closest distance to the observed object that the binoculars can be used while retaining a sharp focus.

RESOLUTION

The measurement of the binocular's ability to distinguish fine detail and sharpness.

EXIT PUPIL

This refers to the size of the small disc of light visible at the eyepiece of a binocular. To determine the size of the exit pupil, divide the objective diameter by the power: For example, a 10x50 binocular will have an exit pupil of 5mm.

EYE RELIEF

This is the distance a binocular can be held away from the human eye and can still observe the entire field of view. Long Eye Relief (LER) reduces eyestrain and is more comfortable for eyeglass wearers.

FOCUS SYSTEM

The mechanism that is used to focus both barrels of a binocular on the object being viewed. They are normally three types of focus systems.

Center Focus – Where the focusing knob is located in the center of the binocular

Individual Focus – Where the focusing knob is located individually in each eyepiece

Fixed focus – No focusing required

DIOPTRER ADJUSTMENT

A ring adjustment for fine-focusing which is usually provided around one eyepiece. This allows to compensate for vision difference between the right and left eye.

Rubber fold-down

Twist-up

EYECUPS

The most common eyecups are twist-up, pop-up, or rubber fold-down.

BINOCULAR LIMITED LIFETIME WARRANTY

(Within USA and Canada only)

This warranty does not cover consumer-caused damages, abuse, normal wear-and-tear, unauthorized repairs or modifications. For further detailed information, please refer to the warranty policy enclosed with products.

Air View

10x42 WP
AB12528

Hit the trails without weighing yourself down! Barska's Air View binoculars are the perfect choice for outdoor enthusiasts who value portability. These lightweight and compact binoculars easily slip into a pocket or backpack, keeping you ready for any adventure. Built tough, they boast a nitrogen-purged waterproof and fogproof body, along with non-slip, shock-absorbing rubber armor for a secure grip. Whether you're hiking, birdwatching, or exploring nature, the Air View Series delivers exceptional views in any light. Fully multi-coated lenses maximize light transmission for exceptional clarity, while BAK-4 prisms enhance image quality. The unique open-bridge design provides long-lasting comfort and a secure grip, keeping your view steady during extended use. A carrying case and neckstrap are included for easy portability.

Air View Features

O-Ring sealed for waterproof protection | Dry nitrogen-purged and sealed to prevent fogging, clouding, and moisture damage | Open bridge design | Fully multi-coated optics to maximize light transmission for brighter images | BAK-4 prisms for crisp and clear images | Twist-up eyecups | Large center focus knob | Rugged shock-absorbing rubber armor | Tripod adaptable fittings | Non-slip and ergonomic design for a secure grip | Includes carrying case and neck strap | Limited Lifetime Warranty

With internal Rangefinder and Directional Compass

deepsea

Calling all sailors and boaters! Barska's Deep Sea Series binoculars are built specifically for life on the water. Featuring the popular 7x magnification for steady images in rough seas, these binoculars boast exceptional optics for crystal-clear views from sunrise to sunset. Navigate with confidence: select models include an internal rangefinder and directional compass. Deep Sea binoculars come in a variety of seaworthy roof and porro prism styles and sizes, perfect for seasoned captains or those just starting out. For extra peace of mind, one Deep Sea model even floats! All binoculars in the series are wrapped in rugged rubber armor for a secure grip, no matter the conditions.

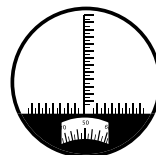

Deep Sea Features

O-ring sealed for waterproof protection | Dry nitrogen-purged and sealed to prevent fogging clouding and moisture damage | High quality optics for increased clarity | BAK-4 or BK-7 prisms | Non-slip and ergonomic rubber design for a secure grip | Heavy-duty and shockproof rubber armor | Ideal a wide range of outdoor activities | Specially designed for nautical use | Includes carrying case and neck strap | Limited Lifetime Warranty

Built for the adventure, Barska's X-Trail binoculars are your perfect outdoor companion. This top-performing series combines exceptional ruggedness with amazing value for quality optics and durability. X-Trail offers a wide selection of sizes and styles, including wide-angle, full-size, and high-powered options, with varying magnifications. No matter your outdoor pursuit, there's an X-Trail binocular perfectly sized and powered for you.

Wide-Angle (WA) Porro System

Models CO10672 and CO10676 feature wide angle Porro Prism binoculars.

Reverse Porro System

Models AB10176 and AB10174 have objectives are offset from the eyepiece in a horizontal way reducing the total size of the construction by about 30% compared to the traditional porro prism system.

Imagine standing atop a towering skyscraper, gazing out at a sprawling metropolis. Or perhaps you're hiking through a lush rainforest, surrounded by exotic flora and fauna. With our high-quality, coin-operated binoculars, you can experience these breathtaking moments with unparalleled clarity and detail. These exceptional optics offer a convenient and affordable way to explore the world's wonders. Whether you're a seasoned traveler or simply seeking a new perspective, these binoculars provide an immersive and unforgettable viewing experience. With up to 25x magnification, you'll see nature, cityscapes, and everything in between with incredible precision.

These binoculars are built to last, featuring a durable, water-resistant construction and a user-friendly design. Whether you're braving the elements or simply enjoying a leisurely stroll, you can rely on these binoculars to deliver exceptional performance. And because they're coin-operated, you can enjoy stunning views without breaking the bank.

NEW

Coin-Operated Binocular
AB14106

- Up to 25x magnification
- 100mm objective lens
- Durable and water-resistant
- User-friendly design
- Easy to operate
- High-quality multi-coated optics
- Free focus to infinity
- Immersive viewing experience

ENCOUNTER

20x,40x100 WP Jumbo Binoculars

AB10520

- Waterproof construction with a rigid all-metal body
- Dual power interchangeable 20x and 40x eyepieces
- Multi-coated optics maximizes light transmission, enhancing clarity
- Large semi-apochromatic 100mm objective lens
- High quality BAK-4 prisms
- Performs well in low-light conditions
- Ideal for celestial and terrestrial observation
- Packaged in premium hard case
- 1-Year Limited Warranty

16x70 Jumbo Binoculars

AB12766

- All metal construction
- Large 70mm objective lenses for maximum light gathering
- Porro prism optical design
- Precision eyepieces with individual focus
- High quality BAK-4 prisms
- Fully multi-coated optics for maximum image clarity
- Convenient removable carrying handle
- Tripod adaptable
- Includes deluxe rigid foam-lined storage case
- 1-Year Limited Warranty

tripod

Deluxe Tripod

AF10374

Tripod features an accessory hook that can be used to further stabilize the tripod in very windy conditions. Hang a counter weight (not supplied) onto the hook to stabilize your tripod.

- Quick release platform
- Accessory hook
- Extendable legs
- Carrying case included
- Max. load weight 8.82 lbs
- Min. height : 26.6 inches
- Max. height: 63.4 inches

Digital Tripod

AF12440

Compact tripod ideal for small optical devices, such as a digital camera, video camera, or almost any other lightweight item that is tripod adaptable.

- Pan head tripod standard platform
- Compact and lightweight
- Extendable legs
- Carrying case included
- Max. load weight 5.5 lbs
- Min. height: 14 inches
- Max. height: 40 inches

Metal Table Top Tripod

AF12652

Provides a steady viewing in a compact and portable design. Attaches to most cameras, binoculars, video cameras, spotting scopes, and much more. This lightweight tripod can easily be transported in a backpack or small bag.

- No-slip rubber feet
- Pan head handle
- Legs of tripod 10 inches
- Height of tripod 9.5 inches

Heavy Duty Table Top Tripod

AF13270

Provides steady viewing in a compact and portable design. Pan head tripod is perfect for stabilizing cameras, binoculars, video cameras, spotting scopes, and much more. This lightweight tripod can easily be transported in a backpack or small bag.

- No-slip rubber feet
- Pan head handle
- Min. height: 11.5 inches
- Max. height: 14 inches

DIGISCOPING ADAPTORS

Digiscoping lets you capture high-magnification photos in nature using your existing camera by attaching it to a spotting scope, essentially turning it into a giant telephoto lens. This allows you to photograph distant wildlife or tiny details with impressive zoom. While it requires some practice to get perfect alignment, digiscoping is a fun and affordable way to enhance your outdoor photography. Elevate your nature photography with digiscoping!

Digiscoping Adaptor

AF10540

- Holds a digital camera to the eyepiece of a spotting scope, telescope, or monocular
- Fits cameras with eyepieces having an outside diameter of 28mm to 45mm.

Camera to Spotting Scope Adaptor

AF11286

- Holds a digital camera to the eyepiece of a spotting scope or telescope
- Mounting ring adjusts for lens sizes from 38.1mm to 66.7mm
- Fits cameras up to 200mm in length
- Distance from the mounting foot connection to the camera's objective lens is 200mm
- Holds up to 3lbs

Binocular Tripod Adaptor

AF10546

- Solid and sturdy
- Fits most binoculars equipped with adapter screws
- To be used with tripods or window mounts

Binocular Harness

AF13250

- Harness distributes the weight of the binoculars on the shoulders, not the neck
- Made from comfortable nylon/lycra straps
- Easy to attach and adjust

Accu-Grip Handheld Tripod

AF10926

- For convenient handheld stable viewing
- Can be used with spotting scopes, binoculars, and cameras that are tripod adaptable
- Can be added to a tripod for an extension and grip

Car Window Mount

AF10544

- A perfect mount for your spotting scopes or binoculars
- Ideal for observation from the comfort of your car

Barska Spotting Scopes

Spotting scopes are essential tools for hunters, target shooters, birders, and nature lovers alike. Barska offers a wide range of spotting scopes in various styles and sizes to meet your specific needs. The Naturescape series, for example, is a great choice for outdoor enthusiasts. These scopes combine high-quality, fully multi-coated optics with a versatile zoom range in a compact and sleek body, making them perfect for any adventure. No matter which Barska spotting scope you choose, you can expect a reliable product that delivers years of enjoyable viewing, making it a valuable companion for all your outdoor activities.

BARSKA® SPOTTING SCOPES

SPOTTING SCOPE TERMINOLOGY

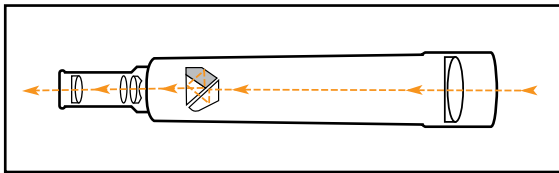

A spotting scope is an optical instrument that is used for spotting or viewing distant objects such as wildlife or landmarks. It is usually high powered but compact.

PRISM SYSTEM/TYPE

The prism system of a spotting scope reduces the size of a long optical path and correct an inverted image.

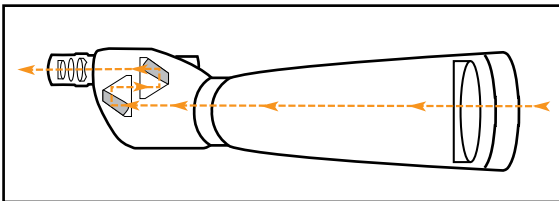

Roof Prism System

The prisms overlap and are aligned in a straight line with the lenses allowing for a slim construction.

Porro Prism System

The objective is offset from the eyepiece offering greater depth perception and a wider field of view.

PRISM GLASS

The common standards of optical prisms are barium-crown (BAK-4) glass or borosilicate (BK-7) glass. The BAK-4 is a higher quality glass that reduces light scattering, resulting in sharper and brighter images.

OBJECTIVE LENS DIAMETER

The second number in the reference (Eg 20-60x60) indicates the diameter of the objective lens or the front lens. The larger the objective lens, the better the light transmission, thus the brighter the image.

ED (Extra Low Dispersion) Glass

ED Glass is designed to provide precise optical color correction. It is multi-coated to improve contrast and transmission across the visual spectrum and provides reduced chromatic aberration.

MAGNIFICATION (POWER)

Magnification is the number of times the object being viewed is enlarged. The spotting scope is often identified by two numbers, for example: 20-60x60. The first number indicates the magnification or the power of the scope, expressed by the letter "x", for times. With this variable zoom power, that means that the object being viewed appears to be 20 to 60 times closer than would be seen with the naked eye.

OPTICAL COATINGS

Various coating processes on the lenses and prisms will determine the brightness and the light gathering of a spotting scope, providing higher contrast and brighter images. The types of coating are:

Coated - A single layer on at least one lens surface

Fully Coated - A single layer on all air-to-glass lens surfaces

Multi-Coated - Multiple layers on at least one lens surface

Fully Multi-Coated - Multiple layers on all air-to-glass surfaces

FOCUS SYSTEM

Using a turn-adjusted knob, this mechanism is used to focus the spotting scope on the object being viewed.

FIELD OF VIEW (F.O.V.)

This is the side-to-side linear measurement of the circular field seen through a spotting scope. It is defined by the width in feet of the area visible at 1000 yards, or in meters at 1000m. The higher the magnification, the narrower the field of view.

CLOSE FOCUS DISTANCE

The closest distance to the observed object that the spotting scope can be used while retaining a sharp focus.

RESOLUTION

The measurement of the scope's ability to distinguish fine detail and sharpness.

EXIT PUPIL

This refers to the size of the small disc of light that exits a spotting scope. To determine the size, divide the objective lens diameter by the power. For example a 20x60 spotting scope will have an exit pupil of 3mm. ($60/20=3$)

EYE RELIEF

This is the distance a scope can be held away from the human eye and can still observe the entire field of view. Long Eye Relief (LER) reduces eyestrain and is more comfortable for eyeglass wearers.

WATERPROOF/FOGPROOF

Spotting scopes can be O-ring sealed for waterproof protection and fogproof which means that they are nitrogen-purged to prevent anti-fogging inside the optical surfaces. These models are able to keep completely dry inside after immersion in water.

SPOTTING SCOPE LIMITED LIFETIME WARRANTY

(Within USA and Canada only)

This warranty does not cover consumer-caused damages, abuse, normal wear-and-tear, unauthorized repairs or modifications. For further detailed information, please refer to the warranty policy enclosed with products.

LEVEL

Level spotting scopes are known for their portability, high-quality optics, and affordability, making them a great choice for various uses. Whether you're out in nature or at the shooting range, their fully multi-coated lenses and large objective lens provide clear, crisp views. The variable zoom lets you easily locate subjects and then zoom in for detailed observation. Built to withstand the elements, these waterproof and fogproof spotters also feature a glare-reducing, extendable sunshade for added comfort. No matter which Level spotter you pick, you can expect a quality product that enhances your viewing experience. Each scope comes with a tripod and carrying case for easy transport, along with a hard case for storage. For peace of mind, Level spotters are backed by Barska Limited Lifetime Warranty.

12-36x50 ED WP

AD11104

- ED (Extra Low Dispersion) glass
- Fully multi-coated optics
- Includes tripod and protective hard carrying case

- Includes pan head tripod and deluxe hard and soft carrying cases

Barska's Naturescape ED series elevates spotting scope optics to a new level. These scopes use BAK-4 prisms and fully multi-coated ED (Extra-Low Dispersion) glass to deliver exceptional clarity, resolution, and minimize color fringing. Compared to standard lenses, ED glass provides sharper, higher-contrast views. Built to endure tough conditions, the Naturescape ED series is waterproof, fogproof, and rugged enough to handle any adventure. Each spotting scope comes with a deluxe hard carrying case for protection and is backed by Barska's Limited Lifetime Warranty for peace of mind.

BLACKHAWK ED

Exceed your expectations with the Blackhawk ED spotting scope series. Known for their portability, exceptional optics, and affordability, these spotting scopes are ideal for various uses, from target shooting to wildlife observation. Their fully multi-coated optics and large objective lenses deliver stunning clarity for a remarkable viewing experience. Variable zoom allows you to easily locate subjects and then magnify them for intricate detail. Even in low-light conditions like dawn or dusk, the Extra-low Dispersion (ED) glass gathers enough light for clear views. Built to withstand the elements, these waterproof and fogproof spotters are also wrapped in protective rubber armor for added impact resistance. Each Blackhawk ED spotting scope comes with a compact tripod, a hard case for secure storage, and a soft carrying case for easy transport. Plus, they're backed by Barska's Limited Lifetime Warranty for long-lasting peace of mind.

Blackhawk ED Features

Zoom magnifications for different applications | Fully multi-coated optics maximize light transmission for superior brightness and clarity | Extra low dispersion (ED) glass | Large objective lens increases light gathering ability thus delivering brighter images in low-light conditions | Waterproof and fogproof protection | Rubber armor designed to protect against and absorb shock | Glare-reducing sunshade | Ideal for a wide range of outdoor activities | Limited Lifetime Warranty

BLACKHAWK

Blackhawk spotting scopes are known for their portability, good optics, and affordability. Whether you're using them at a shooting range, observing wildlife, or simply enjoying the outdoors, Blackhawk spotters offer clear views thanks to their coated lenses and large objective diameters. The variable zoom lets you locate objects easily and then magnify them for detailed observation. Some Blackhawk models are waterproof and fogproof, making them ideal for use in various weather conditions. Additionally, specific models come with a glare-reducing sunshade and a sight tube for enhanced viewing comfort. Whichever Blackhawk spotter you choose, you can expect a quality product that will improve your viewing experience. Most Blackhawk spotting scopes come with a tripod and a carrying case for easy transport and storage. They are also backed by Barska's Limited Lifetime Warranty for your peace of mind.

COLORADO

Bring distant objects into sharp focus with these Colorado Spotting Scopes. This versatile spotter is perfect for birdwatchers, hunters, and naturalists alike. Its high-quality, fully coated optics ensure exceptional brightness and clarity, even in low-light conditions. The large objective lens gathers in more light for a crisp view, while the variable zoom magnification lets you seamlessly lock onto your subject and zoom in for detailed observation. Includes both a hard and soft carrying case for protection, as well as a tripod with its own carrying case for easy portability. Backed by Barska's Limited Lifetime Warranty, this spotting scope is a reliable companion for all your outdoor adventures.

Colorado Features

Variable zoom magnifications for different applications | Fully coated optics maximize light transmission for superior brightness and clarity | Large objective lens increases light gathering ability thus delivering brighter images in low-light conditions | Textured rubber body for a firm grip | Glare-reducing sunshade | Includes soft carrying case and pan head lever tripod | Limited Lifetime Warranty

STARWATCHER TELESCOPES

Embark on a celestial adventure with a Barska Starwatcher telescopes! These user-friendly telescopes are the perfect choice for aspiring astronomers of all ages. Whether you choose a refractor or reflector model, Starwatcher telescopes are easy to set up and come equipped with everything you need to start exploring the wonders of the night sky: telescope, finderscope, eyepieces, mount, and tripod. It's all you need for a lifetime of stargazing adventures!

TELESCOPE TERMINOLOGY

A telescope is an optical instrument that is used to observe distant objects in the night sky. There are many styles and sizes of telescopes. Selecting a size and style depends on the type of observing you intend to do.

TYPES OF TELESCOPES

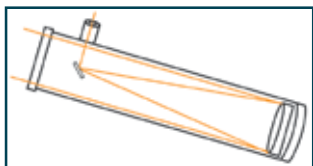

Refractors

Refractors are also known as “dioptrics”. Refractors are characterized by a long narrow optical tube. The diameter of the optical tube (usually denoted in millimeters) varies with the size of the objective (front) lens size. Light passes in a straight line from the front objective lens to a diagonal mirror located in the rear of the optical tube and directly to the eyepiece. Refractor telescopes are suitable for both celestial (night sky) and terrestrial (land) viewing. Note: Objects viewed through a refractor appear wrong reading left to right but right reading up and down.

Newtonian Reflectors

Newtonian Reflectors are also known as “catoptrics”. They use a concave parabolic primary mirror which collects and focuses incoming light onto a flat secondary (diagonal) mirror. The secondary mirror then reflects the image out of an opening at the side of the main optical tube and into the eyepiece. Reflector telescopes are most suitable for celestial (night sky) viewing. Note: Objects viewed through a reflector appear vertically inverted.

TELESCOPE MOUNTS

Altazimuth

The altazimuth (AltAz) is the simplest type of mount. It has two motions – up and down (altitude) and side-to-side/horizontal (azimuth). Better quality altazimuth mounts will have slow-motion knobs for making precise adjustments and aid in keeping tracking motion smooth. Altazimuth mounts are good for terrestrial (land) viewing and for scanning the night sky at lower power. They are not recommended for deep sky photography.

Altazimuth

Equatorial

Equatorial mounts are superior to non-computerized altazimuth mounts for astronomical observing over long periods of time. As the earth rotates around its axis, the stationary stars appear to move across the sky. A telescope on an equatorial mount can be aimed at a celestial object and easily guided using the manual slow-motion controls to follow the object across the sky and keep it in the view of the telescope. The equatorial mount is rotated on one axis (polar/right ascension) adjusted to your latitude and that axis is aligned to make it parallel to the Earth's axis, so that if that axis is

Equatorial

turned at the same rate of speed as the Earth, but in the opposite direction, objects will appear to sit still when viewed through the telescope. Equatorial mounts are preferable for deep sky observing.

FOCAL LENGTH

Focal length is the distance (in mm.) in an optical system. It is a measurement from the lens (or primary mirror) to the point where the telescope is in focus (focal point). The longer the focal length of the telescope, generally the more power it has and the larger the image and the smaller the field of view. Use the following formula to determine the focal length of a telescope: Focal length is the aperture (in mm) times the focal ratio. For example, the focal length of an 8” (203.2mm) aperture with a focal ratio of f/10 would be $203.2 \times 10 = 2032\text{mm}$.

OBJECTIVE LENS SIZE (Aperture)

Aperture size is the single most important factor in choosing a telescope. Aperture is the diameter of the lens or mirror (in mm.). Since the primary function of a telescope is to collect or “gather” incoming light, at any given magnification the larger the aperture the better the viewed image will be. It is important to remember that the larger the objective lens mirror the better, but the size of the lens or mirror diameter limits the amount of power that can be used. The higher the magnification, the less bright the image will be since more light will be distributed over a larger area.

MAGNIFICATION (Power)

Magnification is the number of times the object being viewed is enlarged. The magnification of a telescope is a function of the focal lengths of the tube and eyepieces. To calculate magnification: Divide the focal length of optical tube by the focal length of eyepiece that is being used. For example, a 700mm telescope with a 4mm eyepiece would magnify objects 175x (700 divided by 4).

ACCESSORIES

Barlow Lens

This is an auxiliary eyepiece lens that increases (multiplies) power by a given factor, which is usually 2x or 3x.

Erecting Eye Prism

This lens corrects the inverted (upside down) image when viewing land-based objects seen through a reflector type telescope.

Finderscope

This is a low-powered sighting scope mounted on the top of the telescope's optical tube and has a reticle or an illuminated red dot that allows you to quickly locate the object being viewed.

Focusing Knob

Controls the rack and pinion focusing system and enables smooth and precise movement of the eyepiece to bring objects into sharp focus.

TELESCOPE EYEPIECES

Eyepieces are interchangeable and provide a variety of magnification and field of view options. Use an eyepiece with low magnification to view the Moon, planets, star clusters, nebulae and constellations. The lower the magnification, the wider the field of view. An eyepiece with high magnification enables you to view details in the mountains, ridges and craters of the Moon.

TELESCOPE LIMITED LIFETIME WARRANTY

(Within USA and Canada only)

This warranty does not cover consumer-caused damages, abuse, normal wear-and-tear, unauthorized repairs or modifications. For further detailed information, please refer to the warranty policy enclosed with products.

STARWATCHER | Telescopes

Starwatcher Features

Solid refractor and reflector telescopes | All glass coated optics for enhanced image brightness | Interchangeable eyepieces with a 3x Barlow lens to increase viewing power | Reflector telescope with a rack and pinion focuser | Red Dot finderscope to help aim at sky targets (select models only) and include a 1-Year Limited Warranty | Engineered with smooth functioning mounts sturdy adjustable aluminum tripod with accessory tray (select models only) | Excellent for astronomy enthusiasts and professionals | Limited Lifetime Warranty

ANCHORMASTER

Anchored in tradition, the Anchormaster spyglass isn't just an optical instrument; it's a portal to a bygone era. Handcrafted from solid brass and rich mahogany, this majestic piece embodies nautical elegance. The precision scope, reminiscent of the days of tall ships and pirates, sweeps across the horizon, transforming distant images into breathtaking sights. More than a functional spyglass, the Anchormaster is a sophisticated statement piece, adding a touch of maritime flair to any room. At an exceptional value, it's an invitation to set sail on a sea of sophistication and rediscover the thrill of exploration.

15-45x50 Scope

AA10616

- 15-45x zoom power
- 50mm objective lens
- Mounted on a standing mahogany floor tripod

32x80 Scope

AA10620

- 32x fixed power
- 80mm objective lens
- Length: 40"
- Mounted on a standing mahogany floor tripod

Anchormaster Scope Features

Fully coated achromatic lenses for brilliant images | Structured in a refractor design with helical focusing rings | Internal image-correcting lens provides right-side-up images for the naked eye | Brass mounts allows the scope to move smoothly in all directions | Mahogany tripods with extendable legs and polished brass joints | Ideal for celestial viewing of planets or terrestrial viewing

6x30 Spyscope

AA11126

- 6x magnification
- 30mm objective lens
- Mounted on a desktop mahogany pedestal

Classic Connoisseur

Barska's Classic Connoisseur collection embodies the pinnacle of sophistication. Crafted from gleaming brass, these precision-made optical instruments are not just functional tools, but stunning additions to any décor. Their timeless elegance is matched only by their exceptional optical quality, ensuring a truly enriching experience for both the discerning user and the admiring observer.

*5 Bright White LED Lights

AA10614

- 15-45x zoom
- 50mm objective lens
- Mounted on a desktop mahogany pedestal

 **METAL DETECTORS**
WINBEST® Metal Detectors by BARSKA®

METAL DETECTOR

The Pro-100 metal detector kit is a comprehensive package designed to equip you with the essential tools for a successful treasure-hunting adventure. Featuring a user-friendly metal detector with an easy-to-read display, the Pro-100 allows you to pinpoint buried items with precision. To enhance your treasure-hunting experience, the kit includes a handheld metal detector wand, providing a more targeted approach to your search. Additionally, a sturdy shovel is included to aid in breaking up tough ground and retrieving your discovered treasures. With these essential components, the Pro-100 metal detector kit offers a convenient and efficient solution for uncovering hidden riches.

Handheld Pinpointer Metal Detector

360° degree side and tip detecting | 3 operating modes; audio, vibration, audio and vibration | One touch control | Vibration indicator | LED light | Automatic tuning | Requires 9V battery (not included) | Includes holster and wrist strap

Hand Held Shovel

Lightweight and portable | Built-in inches and centimeter measurements | Textured thumb grip

NEW

Pro-100R Metal Detector w/Handheld Pinpointer BE14068

Auto ground balance that adjusts to different terrain | Quick and easy setup out of the box | Discriminates between different types of metals | Adjustable stem length from 15.5" to 25" inches | 7.4" inches waterproof search coil | Low battery indicator | Audible tones for metal detection | LCD screen for depth and metal detection | Backlight for use in dark areas | Headphone jack for use with headphones (not included) | Overload warning of large metal or highly magnetic object | Arm rest and handle for hours of comfortable detecting | Operates on two 9V alkaline batteries (not included) | Includes shovel

Foldable Metal Shovel w/Bag
AF13292

Durable steel construction | Compact folding design | Converts to a pick for added utility | Serrated edge | Built-in compass | Bottle opener | Includes soft carrying case

Sifter, Shovel, and Rake
AF12270

Consists of the most important hand tools that are needed to get started in recovering valuable objects when searching in sand or soft Earth | Non-metallic | Sifter separates findings from the silt | Hand rake helps to loosen soil | Hand shovel features inches and centimeter markings on the blade

Headphones
AF12274

Padded ear cushions | Adjustable padded headband | Single sided long cord with volume control | No batteries needed | Cable length 6.56ft / 2m.

Carrying Bag
AF11658

Will fit most Barska metal detectors | Made from soft but strong material | Two outside zippered pockets | Long zippered main compartment with a large interior space | Two carrying handles | 45" inches in length | 11" inches wide | Includes adjustable carrying strap

MICROSCOPES

COMPOUND • STEREO

Barska Microscopes

With magnifications ranging from simple to powerful, microscopes open a door to a world invisible to the naked eye. They reveal the intricate details of the microscopic universe, from the building blocks of life in cells to the fascinating structures of tiny organisms. Compound microscopes, with their multi-lens system, act as powerful magnifying glasses, unlocking the cellular world by combining the strengths of objective and eyepiece lenses. On the other hand, stereo microscopes take a different approach. By utilizing dual optical paths and eyepieces, they provide a three-dimensional view of larger objects, allowing for detailed observation without the extreme magnification of compound microscopes. Whether you're a seasoned scientist, a budding student, or a curious explorer, we have the perfect microscope to suit your needs.

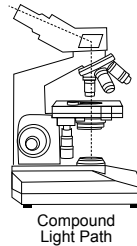

MICROSCOPE TERMINOLOGY

A microscope is an instrument for viewing objects that are too small to be seen by the naked or unaided eye. The science of investigating small objects using such an instrument is called microscopy. The term microscopic means minute or very small.

TYPES OF MICROSCOPES

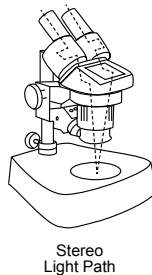

Compound

Constructed with two optical paths at the same angle. The compound microscope has two systems of lenses for greater magnification. The objective lens provides the primary magnification which is compounded (multiplied) by the ocular lens (eyepiece). Images produced by compound microscopes are two dimensional. This type of microscope is used to study very small specimens on a slide.

Stereo

Designed with two separate optical paths with two objectives and two eyepieces to provide slightly different viewing angles to the left and right eyes. In this way it produces a 3-D visualization of the sample being examined. The zoom provides different magnification and features an inversion system which allows the image to be viewed normally and right side up. This type features a large stage for closer viewing of the non-microscopic world like rocks, insects, flowers, and dissection specimens and does not need to be mounted on a slide.

Digital Microscopes

Barska's digital microscopes are state-of-the-art integration of a high quality microscope and a digital camera. Simply connect the microscope to the computer with the USB cord to magnify the object and then view the image on to your PC screen. Digital microscopes are great for educational purposes because several people can view the specimen at once, unlike a traditional microscope where one person can view at time.

POWER

Total Magnification

Total magnification is calculated by multiplying the magnification of the eyepiece by the magnification of the objective. $10x(\text{eyepiece}) \times 4x(\text{objective}) = 40x$ Total Magnification.

Zoom Magnification

Zoom models allow the user to zoom or change magnification continuously throughout the magnification range providing a low to high power range. For example, a 7x-45x microscope has the ability to magnify the object 7 to 45 times higher than an unaided eye.

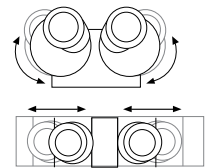

WIDEFIELD EYEPIECE (WF)

An eyepiece with an achromatic doublet lens is designed in such a way that it does not have to be limited to viewing only in its center, and the portion of the lens that allows non-distorted viewing is larger than a normal lens. This appears to the user as a bigger aperture or "hole" to look through. It therefore has the advantage of being easier to use and more forgiving of a user's head movements. An eyepiece listed as WF10X/18mm would indicate it has a widefield achromatic doublet lens, 10x magnification and is 18mm in diameter.

INTERPUPILIARY DISTANCE ADJUSTMENT

When using a binocular microscope with interpupillary adjustment, there is an adjustment for the distance between the viewers' eyes.

A young child will have a small interpupillary distance (IPD) while an adult will have a larger one. The eyepiece lenses will spread apart or get closer together to fit each individual.

MICROSCOPE HEAD

The head refers to the upper part of the microscope that contains the eyepiece tube and prisms.

Monocular

Contains one eyepiece.

Binocular

Binocular has two eyepieces, one for each eye.

Trinocular

The third vertical viewing port can be used with an eyepiece for a second person, such as an instructor, or can be used with an adapter for video or still camera.

ILLUMINATION

Transmitted and Oblique Illumination

Oblique lighting or top lighting shines down and reflects off opaque or solid specimens. Transmitted lighting or bottom lighting shines up through transparent objects. Not all microscopes will have these types of illumination.

Mirror

Mirrored illumination is a simple and inexpensive lighting system that uses light from an external source (in direct sunlight, lamp etc) and reflects it upward to the condenser/specimen from a mirror located below the stage.

Fluorescent

Fluorescent illumination provides a cool bright light. Ideal when viewing slides for long periods or studying live cellular specimens.

Halogen

Halogen illumination provides the very brightest illumination, but tends to give off heat.

DIAPHRAGM

Generally a five-hole disc placed under the stage on a high power microscope. Each hole is a different diameter. By rotating it, you can vary the amount of light passing through the stage opening. This will help to properly illuminate the specimen and increase contrast and resolution. The diaphragm is most useful at the higher powers.

WORKING DISTANCE

This is the distance between the specimen or cover slip and the objective lens. On compound microscopes that use slides, the stage is adjustable allowing the user to zoom in or out of an image. On stereo microscope the stage is fixed.

ADJUSTMENTS

Coarse Focus

This is the rough focus knob on the microscope. You use it to move the objective lenses toward or away from the specimen. Generally use the coarse focus first to get close then adjust the fine focus knob for fine tuning.

Fine Focus

This is the knob used to fine tune the focus on the specimen. It is also used to focus on various parts of the specimen.

WARRANTY

Microscope 1-Year Limited Warranty USA and Canada Only, This warranty does not cover consumer caused damages, abuse, normal wear-and-tear, unauthorized repairs or modifications. For more information, refer to enclosed warranty with products.

MiCROSCOPE

300x, 600x, 1200x Monocular Compound Microscope Explorer Kit
AY12938

This microscope kit unlocks the wonders of the microscopic world for budding scientists. This comprehensive kit includes everything you need for exploration, from powerful magnification to engaging experiments. Featuring a 20x eyepiece and interchangeable objective lenses (15x, 30x, and 60x), the microscope offers a range of magnifications from 300x, 600x to 1200x, allowing you to see intricate details invisible to the naked eye. A cool LED light source provides bright, natural illumination for comfortable viewing, while coarse and fine focus knobs ensure sharp and clear images. Stage clips keep your slides or specimens secure, and colored filters enhance specific details for a more thorough analysis. The kit even includes brine shrimp eggs and a hatchery, allowing you to witness the fascinating process of life firsthand. With everything you need to get started, the Monocular Compound Microscope Explorer Kit is the perfect gateway to a world unseen.

Includes

- 7 Slide Covers
- 7 Blank Slide Labels
- 7 Blank Slides
- 5 Prepared Slides
- 2 Collecting Vials
- 1 Eosin
- 1 Brine Shrimp Eggs
- 1 Shrimp Hatchery
- 1 Micro Slicer
- 1 Needle
- 1 Graduated Cylinder
- 1 Sea Salt
- 1 Petri Dish
- 1 Replacement Light Bulb
- 1 Tweezers

- 1 Gum Media
- 1 Stirring Rod
- 1 Scalpel
- 1 Carrying Case

20x, 50x Student Binocular Stereo Microscope
AY13116

Stereo microscopes are designed to provide a three-dimensional (3D) view of specimens at low magnification. They achieve this by using two separate optical paths, each with its own objective lens, to deliver slightly different viewing angles to your left and right eye. This creates a depth perception similar to natural vision. The objective lenses are typically positioned side-by-side within the head of the microscope. Stereo microscopes feature a large working stage, making them ideal for observing objects that are too large or thick for traditional microscopes that use transmitted light. Common examples of specimens viewed with stereo microscopes include insects, plants, flower parts, stamps, coins, and circuit boards.

Features

- 20x, 50x Magnification
- WF10x, 25x Eyepieces
- Oblique Illumination
- Coarse Adjustments
- Interpupillary Distance Between 55mm-75mm

Includes

- 7 Blank Slides, Labels and Cover Slips
- 5 Prepared Slides
- 1 Forcep
- 1 Granite Fragment

Ideal For

- General Medical Applications
- Industrial Use
- Hobbyists/Collectors
- Educational Fields

Model #	Type	Magnification	Objective	Eye Piece	Working Distance	Adjustment Knob Type	Illumination	Body Material	Weight (kg)
AY12938	Compound	300x, 600x, 1200x	15x, 30x, 60x	20x	Adjustable	Coarse and Fine	LED and Mirror	Metal	1.31
AY13116	Stereo	20x, 50x	2x, 4x, 10x	WF10x, 25x	70mm	Coarse	LED	Plastic	0.9
